ZF6HP19/X, ZF6HP21/X, ZF6HP19A**Notes**

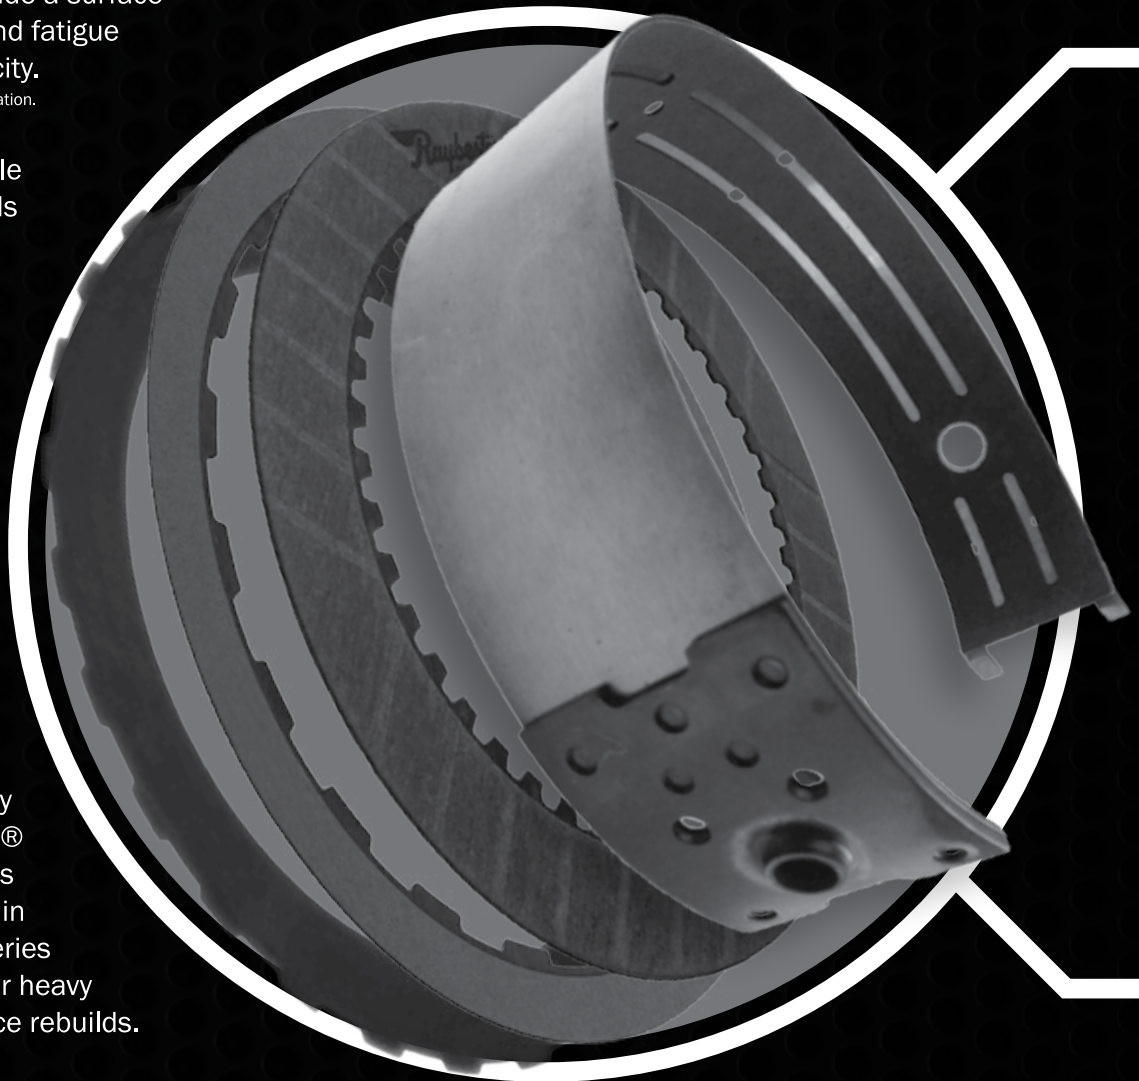

Kolene® steel clutch plates provide a surface treatment that enhances wear and fatigue resistance while increasing lubricity.

Kolene® is a registered trademark of the Kolene Corporation.

Stage-1 frictions are an affordable solution that can handle demands that a stock tan or high energy plate cannot. Choose Stage-1 for street rods, tuner cars and mild street strip applications.

Gen2 racing clutches designed for ALL TYPES of racing are state-of-the-art, power absorbing clutches that perform with very low wear, excellent fatigue strength, high durability and quick shifts with little shock for even faster times.

Pro-Series bands use high energy material constructed with Kevlar® fibers along with solids and resins that enhance band performance in high stress transmissions. Pro-Series bands are the perfect upgrade for heavy duty, towing and high performance rebuilds.

GPX

The First & Only X-Factor for Honda

Raybestos Powertrain "Global Performance Extra" friction material is designed to match Honda/Acura transmissions perfectly and outperform any other Honda/Acura friction plate. Raybestos proprietary engineered friction material combined with a unique groove design pattern allows the GPX to withstand high temperatures, create smooth shifts and provide greater durability than OE. With the industry's tightest manufacturing specifications for trouble-free installation the GPX is an OE replacement without the OE cost.

ADVANTAGES

- Unique "X" groove design provides for smooth shifts
- Proprietary Raybestos engineered friction material
- Industry's tightest manufacturing specifications
- Fits Honda/Acura transmissions perfectly
- Withstands higher temperatures than OE
- An OE replacement without the OE cost
- Greater durability than OE
